

## ***Preventive Maintenance Checklist***

### **Vehicle Restraint**

- Inspect all weld points for cracked or broken welds.
- Inspect attachment areas for any sprawling or damage.
- Inspect anchor points for loose or damaged anchors.
- Inspect drive motor and gearbox for wear and damage.
- Adjust drive chain tension and clutch assembly.
- Inspect hook and hook-shaft for wear and damage.
- Inspect limit-switches and cam.
- Remove exterior carriage assembly and clean and lubricate.
- Inspect all carriage rollers and clean and lubricate.
- Inspect roller track for unobstructed vertical travel.
- Inspect nose extension for damage and wear.
- Operate unit and check for proper operation and engagement.
- Inspect interior and exterior communication lights for proper operation.
- Inspect wire harness for damage and cuts.
- Check operation of safety warning device.

#### **Note:**

Inspection includes an itemized description of all damages and potential problems. ADS provides you with a proposed course of action and a cost for repair. Minor repairs and safety-related problems are repaired during preventive maintenance.
